

Your building investment demands the best products & expertise available.

Steel Truss Solutions design and build steel frame wall and roof systems for all purposes. You can rely on the experience and skills offered by our team.

Contact us for friendly advice and assistance with your special project.

We enjoy the challenge of helping our clients get the best and most cost-effective way of building their design. We can often find innovative and creative methods to maximise space without breaking the bank.

Our fully computerised systems design almost any single or two storey home, storage facility, shop, school, granny flat, chalet, workshop or shed. From building small weekenders to multi million dollar prestige homes, we have the solutions!

OWNER BUILDERS

The majority of our clients are owner builders who want to minimize the cost of their building project. Our product range supports on-site efficiencies and enables you to perform most tasks yourself with limited assistance or specialised skills.

We are continually researching new materials which simplify and optimise the process of erecting dwellings independently and making efficient use of materials. Difficult sites or unusual designs are especially suited to light weight, high strength steel solutions. You can take your time as steel, unlike timber, will not twist and warp before your eyes as it is left exposed to the elements!

Consider the advantages and make the right choice.

TOUGH & TRUE

- Our steel frames are precision engineered and will not shrink, twist or warp. No sticking doors, cracked walls, ceilings or cornices.

WILL NOT BURN

- Steel reduces the amount of flammable material in your home because it's naturally not combustible.

FLEXIBLE DESIGN

- Lightweight steel gives you more design options with its spanning ability. Great for open spaces and feature bulkheads and ceilings. Perfect for steep, hilly sites. Easy and fast to erect.

PEST & ROT PROOF

- 100% termite and borer proof. No need to apply toxic chemical treatments to steel frames.

FUTURE FRIENDLY

- Steel is one of the most recyclable materials in the world. At the end of its service life a steel framed house can be 100% recycled to make new steel

PEACE OF MIND

- Our steel framing carries a fifty year warranty (conditions apply).
